

VJOYCAR Latest 6th Generation Wireless Auto Door Handle

For Tesla Model Y & 3 & 3 Highland

Product Features:

1. Universal for All Model Y (2020+), Model 3 (2016+)
2. **Multi-color display: Method to change color:**
 - A. for Tesla Model 3/Y:** Get in the vehicle, close all doors, long press P-gear button for 3 seconds till hear the main control box to send out "Beep" sound, the color of the door handle will automatically switch.
 - B. for Tesla Model 3 Highland without shift lever:** Get in the vehicle, close all doors, long press the right scroll wheel for 3 seconds till hear the main control box to send out "Beep" sound, the color of the door handle will automatically switch.
3. Detailed Installation Steps are available: <https://youtu.be/HNUgQaQbKtM>

Connect Bluetooth via cellphone after finish install, then Welcome Mode will work (Door handle will pop up automatically when you approach):
Bluetooth Name: T-VJOYCAR Password: 999999

Attention 1:

Only about 3% cars need to add metal spacers.

We add metal spacers inside package, you can install door handle without metal spacer at first. If door opens automatically as door handle pops up, then need to add metal spacer to lower Hall Sensor signal. (Door can't open if you add it directly on most cars)

Attention 2:

There is no LED indicator on control box. After connect battery (positive and negative pole), It will send out Beep-Beep sound, which means power connected successfully.

Q&A:

Q1: Why can't search for bluetooth on cellphone?

A1: Unplug power connector from controller module and turn it back.

Q2: After bluetooth connected, why one door handle can't pop up when you approach the car, and it can only pop up when you press it?

A2: Need to re-pair door handle with controller module. It doesn't matter if you install door handles already. Just same operation, long press the door handle bar.

How to pair controller moduel with door handles:

1. connect power of controller, turn on Button 1 on controller (only button 1), Red indicator will flash, it is pairing status;
2. long press the door handle bar till LED flashes, then loose your hand;
3. Wait the Door handle flash till stop and go black, and pairing completes;
4. Turn off Button 1 on the controller **(very important, otherwise it will keep pairing status)**
